## DO NOT OPEN THIS TEST BOOKLET UNTIL YOU ARE ASKED TO DO SO

### TEST BOOKLET A.P. (MECH) T.E.-2016

	All questions carry equal marks.
_	INSTRUCTIONS
1.	Immediately after the commencement of the examination, you should check that test booklet does not have any unprinted or torn or missing pages or items, etc. If so, get it replaced by a complete test booklet.
2.	Write your Roll Number only in the box provided alongside.  Do not write anything else on the Test Booklet.
3.	This Test Booklet contains 100 items (questions). Each item comprises four responses (answers). Choose only one response for each item which you consider the best.
4.	After the candidate has read each item in the Test Booklet and decided which of the given responses is correct or the best, he has to mark the circle containing the letter of the
	selected response by blackening it completely with Black or Blue ball pen. In the following example, response "C" is so marked :
	(A) (B) (D)
5.	Do the encoding carefully as given in the illustrations. While encoding your particulars or marking the answers on answer sheet, you should blacken the circle corresponding to the choice in full and no part of the circle should be left unfilled. After the response has been marked in the ANSWER SHEET, no erasing/fluid is allowed.
6.	You have to mark all your responses ONLY on the ANSWER SHEET separately given according to INSTRUCTIONS FOR CANDIDATES' already supplied to you. Responses marked on the Test Booklet or in any paper other than the answer sheet shall not be examined.
7.	All items carry equal marks. Attempt all items. Your total marks will depend only on the number of correct responses marked by you in the Answer Sheet. There will be no negative marking.
8.	Before you proceed to mark responses in the Answer Sheet fill in the particulars in the front portion of the Answer Sheet as per the instructions sent to you.
9.	If a candidate gives more than one answer, it will be treated as a wrong answer even if one of the given answers happens to be correct.

10.

After you have completed the test, hand over the Answer Sheet only, to the Invigilator.

1.	A condenser of a refrigeration system rejects heat at a rate of 120 kW while
	its compressor consumes a power of 30 kW. The coefficient of performance
	of the system would be :
	(A) 1/4 (B) 4
	(C) 1/3 (D) 3
2.	1 kg of water at room temperature is brought into contact with a high
	temperature thermal reservoir. The entropy change of the universe is :
	(A) Equal to entropy change of the reservoir
	(B) Equal to entropy change of water
	(C) Equal to zero
	(D) Always positive
3.	A mould has downsprue whose length is 20 cm and the cross-sectional area
	at the base of the downsprue is 1 cm2. The downsprue feeds a horizontal
	runner leading into the mould cavity of volume 1000 cm <sup>3</sup> . The time required
