TEST BOOKLET A.P.(COMP. ENGG.)T.E.-2016

Time	e Allowed : 2 Hours] [Maximum Marks : 100
	All questions carry equal marks.
	INSTRUCTIONS
1,	Immediately after the commencement of the examination, you should check that test booklet does not have any unprinted or torn or missing pages or items, etc. If so, get it replaced by a complete test booklet.
2.	Write your Roll Number only in the box provided alongside. Do not write anything else on the Test Booklet.
3.	This Test Booklet contains 100 items (questions). Each item comprises four responses (answers). Choose only one response for each item which you consider the best.
4.	After the candidate has read each item in the Test Booklet and decided which of the given responses is correct or the best, he has to mark the circle containing the letter of the selected response by blackening it completely with Black or Blue ball pen. In the following example, response "C" is so marked:
	(A) (B) (D)
5.	Do the encoding carefully as given in the illustrations. While encoding your particulars or marking the answers on answer sheet, you should blacken the circle corresponding to the choice in full and no part of the circle should be left unfilled. After the response has been marked in the ANSWER SHEET, no erasing/fluid is allowed.
6.	You have to mark all your responses ONLY on the ANSWER SHEET separately given

- You have to mark all your responses ONLY on the ANSWER SHEET separately given according to 'INSTRUCTIONS FOR CANDIDATES' already supplied to you. Responses marked on the Test Booklet or in any paper other than the answer sheet shall not be examined.
- All items carry equal marks. Attempt all items. Your total marks will depend only on the number of correct responses marked by you in the Answer Sheet. There will be no negative marking.
- Before you proceed to mark responses in the Answer Sheet fill in the particulars in the front portion of the Answer Sheet as per the instructions sent to you.
- If a candidate gives more than one answer, it will be treated as a wrong answer even if one of the given answers happens to be correct.
- 10. After you have completed the test, hand over the Answer Sheet only, to the Invigilator.

(B) $\neg P \rightarrow Q$

(C) $\neg P \rightarrow \neg Q$

(D) ¬Q→¬P

72.	Which of the following data structure is typically used in traversing a graph
	by breadth first search?
	(A) Stack (B) Queue
	(C) Heap (D) None of these
73.	An undirected graph has n nodes and its adjacency matrix is given by
	$n \times n$ square matrix whose diagonal elements are 0's and non-diagonal elements
	are 1's. Which of the following is correct for the graph?
	(A) The graph has a unique minimum spanning tree of cost n
	(B) The graph has a unique minimum spanning tree of cost n-1
	(C) The graph has multiple minimum spanning trees each of cost n
	(D) The graph has multiple minimum spanning trees each of cost n-1
74.	In a relational database system, if $D_1, D_2,, D_n$ are the domains of n attributes
	then a relation (table) defined on these n attributes is a subset of :
	(A) $D_1 \times D_2 \times \times D_n$
	(B) $D_1 \cup D_2 \cup \cup D_n$
	(C) $D_1 \cap D_2 \cap \cap D_n$
	(D) None of the above

- 75. A property of normalization of relations which guarantees that functional dependencies are present in separate relations after decomposition is classified as:
 - (A) Non-additive join property
 - (B) Inter-dependency preservation property
 - (C) Dependency preservation property
 - (D) Additive join property
- 76. Consider the following algorithm :

Algorithm A(r)

Input: Root r of a full (proper) binary tree

if r is a leaf then return 0

else (

 $m \leftarrow A \text{ (left child of r)}$

n ← A (right child of r)

if m > n then return m + 1

else return n + 1

١

What does the above algorithm compute?

- (A) The height of the tree
- (B) The number of leaf nodes in the tree
- (C) The number of total nodes in the tree
- (D) None of the above

77.	A certain quadratic time algorithm uses 400 elementary operations to process									
	an input of size 10. What is the most likely number of elementary operations									
	it w	it will use if input size is 100 ?								
	(A)	400	(B)	1600						
	(C)	40000	(D)	160000						
78.	In t	the case of bubble sort	method, an	approximation of the	number of					
	com	comparisons and exchanges to sort an array of size N is :								
	(A)	(A) N ² comparisons, N ² exchanges								
	(B)	N^2 comparisons, $N^2/2$	exchanges							
	(C) N ² /2 comparisons, N ² exchanges									
	(D)	(D) N ² /2 comparisons, N ² /2 exchanges								
79.	The	The Inorder traversal of which of the following will yield a sorted list of
